Nicolas Wajs

Forward Deployed Engineering Candidate — Enterprise AI Delivery | Financial Services | Agentic AI

Nicolas.Wajs@gmail.com · +33 6 8089 4962 · linkedin.com/in/nicolaswajs2025 · github.com/NicolasWs · Paris, France

Summary

15+ years running what Google calls Forward Deployed Engineering before it had the name: embedding inside enterprise customers (tier-1 banks, asset managers), translating ambiguous business problems into production systems, and owning the outcome end to end. In the last year I've built that same motion around agentic AI — designing and shipping a multi-agent crewAI system (coordinated agents, tool calls, state handoffs between matching and ranking steps) that cut candidate-sourcing time by 40% for a staffing partner.

AI / Orchestration Skills (hands-on)

- **Agentic systems:** crewAI — multi-agent coordination, tool integration, state handoffs (production POC, 40% sourcing-time reduction). LangChain/RAG (DeepLearning.AI-certified). Closest practical equivalent to LangGraph/AutoGen-style graph orchestration; actively extending into those frameworks.
- **Data & ML platforms:** Dataiku (Generative AI Practitioner, Core Designer), KNIME (Data-Aware Agentic AI), Apache NiFi, Clickhouse, PostgreSQL.
- **Delivery stack:** Python, SQL, APIs, Spark, Cloud (GCP/AWS, Azure in production).

Relevant Experience

Product & AI Strategy Lead — Freelance, Data/AI & Financial Services

Jul 2025 – Present

- Delivered a broker-voting application for a French asset manager end-to-end (design to production on Azure) in under two months, using a full AI-assisted development lifecycle — the same "customer problem to working system" delivery model this role is built around.
- Designed and shipped a multi-agent crewAI system automating candidate/mission matching for a staffing partner, cutting sourcing time 40%.
- Transitioned a Credit Derivatives / Securitization data platform to production at tier-1 investment banks with zero trading disruption.

Product Manager – SaaS & Customer Success — Opensee, SaaS

Oct 2022 – Apr 2025

- Owned the data-ingestion and integration layer behind HSBC Asset Management's first cloud deployment: built pipeline reconciliation (Apache NiFi), personally ran the Jira-based anomaly-triage process when issues surfaced, and led rollout of the Python connector library directly onto customer workstations — real API-level enterprise integration, not a slide about it.

- Delivered 99% uptime against a 95% contractual target in the first six months; reported weekly to the customer's CTO.

Principal Product Advisor – EMEA & Americas — Finastra, Customer Experience

Sep 2017 – Oct 2022

- Ran technical audits and solution design across 30+ tier-1 banks and asset managers (NYC, Brussels, Amsterdam, Paris, Verona), interfacing directly with product and engineering teams on technical delivery strategy and roadmap input.
- Coordinated RFP responses and competitive technical positioning on $500K–$3M enterprise deals.

Account Manager & Technical Lead — Misys / Sophis SAS

Jul 2011 – Jun 2017

- Technical account ownership and hands-on troubleshooting for 15+ buy-side/sell-side institutions in production environments (risk, trading, order management systems).
- Directed implementation and upgrade programs; mentored 45 consultants across Europe and Asia.

Education & Certifications

- École Polytechnique (X-EXED) — AI for Business, AI & Data Management Solution Engineering — Apr 2025–Jan 2026
- Practical Multi AI Agents with crewAI — DeepLearning.AI — Jul 2025
- LangChain and RAG — DeepLearning.AI — Aug 2025
- Dataiku Generative AI Practitioner / Core Designer — Jul 2025
- Professional Risk Manager (PRM), PRMIA — 2019
- M.Sc., ENSIIE, Évry — Financial Modeling — 1999–2002
