Nicolas Wajs

AI Outcome Customer Engineer — Enterprise Cloud Deployments & Technical Delivery

Nicolas.Wajs@gmail.com · +33 6 8089 4962 · linkedin.com/in/nicolaswajs2025 · github.com/NicolasWs · Paris, France

Summary

15+ years as the customer-facing technical owner enterprises call when a cloud-native deployment isn't delivering — debugging pipelines, negotiating uptime commitments, reporting straight to the CTO — now paired with a year of hands-on agentic AI build experience (crewAI, LangChain/RAG). Built for the Outcome Customer Engineer mandate: real code-level troubleshooting across the stack plus real enterprise customer judgment, with genuine (not generic multi-cloud) GCP exposure.

Relevant Experience

Product Manager – SaaS & Customer Success — Opensee, SaaS

Oct 2022 – Apr 2025

- Owned the data-ingestion and quality layer behind HSBC Asset Management's first cloud-native, multi-tenant SaaS deployment: debugged and reconciled Python-based ETL feeding Apache NiFi pipelines, running anomaly triage myself via a Jira-based process.
- Led rollout of the Python connector library directly onto customer workstations — enterprise integration work opening platform access via Excel and Python, plus Tableau Server/Desktop connectivity, alongside the access-control work required for ISO 27001/SOC 2 compliance.
- Set technical delivery strategy for the platform's compliance workstream, interfacing directly with engineering to sequence ISO 27001/SOC 2 requirements against the production go-live; met 99% uptime against a 95% contractual target, reporting weekly to the CTO.
- Drove cloud implementation expansion to two additional enterprise accounts (Kepler Cheuvreux, Taula Capital).

Principal Product Advisor – EMEA & Americas — Finastra, Customer Experience

Sep 2017 – Oct 2022

- Ran technical audits and solution design across 30+ tier-1 banks and asset managers, interfacing directly with product and engineering organizations to turn customer feedback into roadmap input.
- Delivered client workshops across 5 major European/US financial hubs, lifting qualified pipeline 65%.

Product & AI Strategy Lead — Freelance, Data/AI & Financial Services

Jul 2025 – Present

- Delivered an Angular/.NET web application end-to-end on Azure in under two months via an AI-assisted development lifecycle — hands-on across the full stack, including reading and debugging the generated Angular (JavaScript/TypeScript) and .NET code before production release.
- Designed and shipped a multi-agent crewAI system (coordinated agents, tool calls, state handoffs) for a staffing partner — the closest practical equivalent to LangGraph/AutoGen-style orchestration — cutting candidate-sourcing time 40%.

Account Manager & Technical Lead — Misys / Sophis SAS

Jul 2011 – Jun 2017

- Technical account management and hands-on troubleshooting for 15+ buy-side/sell-side institutions on production risk and trading systems.

Technical Skills

- **Debugging & integration:** Python (ETL/connector debugging), Angular/JavaScript & .NET (reviewed and debugged in production build), SQL, APIs, Apache NiFi, Tableau connectors.
- **Cloud & architecture:** cloud-native, multi-tenant SaaS architecture (Opensee), Azure (production delivery), **GCP** & AWS, Clickhouse, PostgreSQL.
- **AI orchestration:** crewAI (multi-agent design), LangChain/RAG (DeepLearning.AI-certified); Dataiku, KNIME.
- **Compliance/enterprise-grade ops:** ISO 27001, SOC 2, access control, uptime SLA management.

Education & Certifications

- École Polytechnique (X-EXED) — AI for Business, AI & Data Management Solution Engineering — Apr 2025–Jan 2026
- Practical Multi AI Agents with crewAI — DeepLearning.AI — Jul 2025
- LangChain and RAG — DeepLearning.AI — Aug 2025
- Dataiku Generative AI Practitioner / Core Designer — Jul 2025
- Professional Risk Manager (PRM), PRMIA — 2019
- M.Sc., ENSIIE, Évry — Financial Modeling — 1999–2002
